FOR IMMEDIATE RELEASE

Universal Valve Co. Announces Release of Retrofit Sump Cover

(Elizabeth, NJ) August 1, 2008 – Universal Valve Co. recently announced the release of its model number 1943-, Retrofit Sump Cover. The retrofit sump cover is designed to eliminate leaking of polyethylene and fiberglass sump covers without breaking concrete. UST Regulations now require that all components of a UST system be tested for complete “product tightness”.

The 1943-, is designed with a double seal to keep sumps completely dry. The introduction of the retrofit sump cover now makes it easy for station operators to replace leaky sump covers in minutes. The easy-to-install adjustable clamping device makes it simple to replace existing covers and without the need to rely on adhesives and glues (known to deteriorate after 1 year). The new Universal retrofit cover assures the tightest seal possible.

An additional 8” safety monitoring access cover provides easy access into the sump without removing the entire top cover saving time and preventing injuries. “In the past, when end-users had problems with water infiltration into their oval sumps, there was basically no alternative except to dig it out and replace it,” says Martin Pettesch, Executive VP of Universal Valve Co. “Now, this replacement cover can just be dropped on and bolted into place, and the problem is solved in minutes.”
