FOR IMMEDIATE RELEASE

Universal Valve Co. Releases New Replacement Compressor Kit for Air Towers

(Elizabeth, NJ) February 11, 2011 – Universal Valve Co. has recently announced the release of its new Replacement Compressor Kit for air towers, part number 1975-COMP-TKIT. Universal's replacement compressor kit is designed to install into most air towers where a Thomas compressor was originally installed. It is fabricated to fit multiple air tower brands including all Universal Valve air towers as well as other manufactures that used Thomas compressors such as Richards Eco line.

Universal's new replacement compressor kit consists of oil less rocking piston air compressors for outstanding performance and reliability. It includes mounting brackets to install into existing air towers that previously used a Thomas air compressor. The unit features $\frac{3}{4}$ horse power and can inflate tires up to 100 psi. These compressors run silent and smooth and can be easily installed into air towers already placed in the field. The new replacement compressors are built tough for durability to operate in high heat and freezing weather conditions.

Universal's new compressor replacement kit is available for order now. They are available for installation into existing Universal Valve air towers, part numbers 1975- and 1975R-, wall or post mounted as well as coin operated or free air towers. More information on the new replacement compressor kit can be found at
