Universal Valve Announces Release of Composite Manhole Line

For Immediate Release

(Elizabeth, NJ) October 2016 – Service station equipment manufacturer, Universal Valve Co., recently announced the addition of composite manholes to their product offering. Universal’s composite manholes use all new composite and resin technology to ensure a lightweight and heavy duty manhole. This technology produces an H-25 load rated cover, which is above the industry standard and is built to withstand heavier traffic patterns associated with high volume c-stores.

The new composite manholes are available in 39” and 44” covers and can be specified with an optional key lift handle. The lightweight, domed lid sheds water and is easy to lift and move. The lids are interchangeable with other manufacturers’ lids making for trouble-free replacement.

The patented bottom flare locks into concrete making for sturdy installation. Universal’s composite manholes are UV resistant and have an anti-slip surface.
