FOR IMMEDIATE RELEASE

Universal Valve Co. Releases New Field Replaceable Spill Container

(Elizabeth, NJ) March 5, 2010 – Universal Valve Co. has just announced the release of its new Field Replaceable Spill Container, model number FR-. Universal's field replaceable spill container is designed with the ability to upgrade containers as industry, local and state regulations change.

Universal Valve's field replaceable spill containment system offers the customer an easy solution to swapping spill containers in the field. Universal's shell permits the installation of a new container without the need to break concrete. Not breaking concrete saves the station and installer time and money from having to shut down operations while the concrete sets.

Universal's field replaceable spill container allows stations to easily upgrade in the future. A Universal single wall spill container can be installed today and can be replaced with a double wall spill container in the future without the need to break ground.

Universal's field replaceable spill containers are available for order now. They are available with a variety of different options to fit the stations needs. They can be fit with sensors as well as water tight and rain tight lids. More information on the field replaceable spill containers can be found at <http://www.universalvalve.com/proddetail.asp?prod=FR>.
