Universal Valve Releases New Rag Stopper

For Immediate Release

(Elizabeth, NJ) October 2014 – Service station equipment manufacturer, Universal Valve Co., recently announced the release of the Rag Stopper. The Rag Stopper is specifically designed to prevent debris from entering the tank during filling. It will save on expensive recurring maintenance fees associated with removing rags and debris that clog submersible pumps.

The carbon steel constructed Rag Stopper is compatible with all 4” fill adaptors. All fueling operations remain the same as the Rag Stopper does not restrict the flow of fuel during the filling process. It also prevents fuel theft by blocking the stinger from entering the tank.

With costly recurrent maintenance fees adding up, Universal Valve’s Rag Stopper is the simple, effective, and inexpensive fix to eliminate submersible pump obstructions.
